Skills

Most Recent and Familiar

Programming Languages: Clojure, Python, Bash, SQL

Tools/Services: Git, Bazel, AWS, Terraform, GitHub Actions

Worked with in the Past

Programming Languages: Rust, Go, Javascript, Java, C, C++, MATLAB/Octave, CSS/LESS/SASS

Tools/Services: AWS CDK, Azure, Ansible, Kubernetes, Packer, Webpack, AngularJS/Vue.js/React

Experience

Senior Software Engineer at Splash Financial March 2022 – Present

Splash is a marketplace for personal loans and student loan refinancing. I work with our product team and several technical teams to design and implement features that span the whole loan lifecycle: prequalification, postqualification, underwriting, document generation, and disbursement.

Clojure Bazel PostgreSQL PHP AWS Terraform Datadog

Cloud Engineer at IronNet March 2019 – March 2022

Oversee all cloud-related endeavors and develop internal tooling. Some things that I personally worked on:

- Designed and implemented a new data-ingest pipeline that leverages AWS managed services (like ALB, Kinesis, and ECS) in order to be more scalable and reliable than previous designs.
- Created and improved various internal tooling (mostly in Python) for things like:
 - Managing Kubernetes clusters
 - Creating AWS accounts
 - Deploying applications (usually to Kubernetes)
 - Maintaining cross-account permissions
 - Leveraging AWS spot instances

Python Go Bash Kubernetes helm AWS Azure Terraform

Software Engineer at Fugue

Jul 2015 – Jan 2019

Fugue was a startup product for defining and enforcing cloud infrastructure in AWS and Azure (somewhat like Terraform, but with always-on active enforcement and a richer language). Fugue introduced a compiled language that surfaced many cloud infrastructure problems at compile-time instead of runtime.

- Design and document features, create and end-to-end test harness
- Wrote a utility for completely clearing AWS accounts (Python)
- Created an automated pipeline for building test VMs in AWS and Azure (Ansible, Packer, Go, Azure Resource Manager)

Python

Bash

Clojure

Go

Haskell

AWS

Azure

Ansible

Packer

Concourse

Web Developer at Wells Fargo

Feb 2015 – Jul 2015

Member of a small team creating internal auditing tools and a task-tracking application.

Java

Spring

Hibernate

YUI

Javascript

Startup Entrepreneur

May 2014 – Jan 2015

A short stint at creating a small business. It was primarily focused on two business ventures:

- Worked with a medical clinic to create a web application that helped provide communication between doctors, patients, nurses, and call center operators.
- Partnered with another small team to build a recruiting platform for executives.

MEAN stack

Docker

Java 8

Scala

MySQL

Bash

L^AT_EX

Consultant at Red Hat

Aug 2011 – May 2014

I traveled to client sites and worked on a variety of projects. Some projects involved integrating the JBoss suite of products (which RedHat had recently acquired). Some was more general help with product design and implementation.

Java

JBoss

JBoss Rules

jBPM

Hibernate

MyBatis

Grails

AngularJS

Education

UNIVERSITY OF VIRGINIA, School of Engineering and Applied Science, Charlottesville, VA
B.S. in Computer Science, May 2011

Outside of Work

I love family time, baby time, reading, running, and cycling. Sometimes I play around with Emacs and Elisp.
